Profile

Associate Software Engineer with expertise in building **scalable microservices** and **high-throughput data pipelines**. Proficient in **modernizing legacy architectures** and **optimizing system performance** using **Java**, **Spring Boot**, and **Big Data technologies**.

Technical Skills

Languages & Frameworks: Java, Spring Boot, Python, PySpark, PyTorch, Angular, Tailwind CSS, Bootstrap
Databases & Big Data: MySQL, MongoDB, Kafka, Redis, Vertica, Hive, HDFS
Cloud & Tools: AWS (EC2, S3), Docker, Jenkins, Git, REST & SOAP APIs

Professional Experience

Vertoz Limited (NSE: VERTOZ)
Associate Software Engineer **August 2025 – Present**
ConnectReseller: An ICANN-accredited domain registrar and reseller platform

- Contributed to the migration of a legacy **Spring monolithic application to Spring Boot based microservices architecture**, improving system scalability, modular deployment, and service isolation.
- Designed and normalized **MySQL relational database schemas**, creating new databases, tables, and foreign key constraints while eliminating legacy redundancies to improve data consistency and query performance.
- Developed **Spring Boot REST APIs** for Registrar, Reseller, and Customer onboarding.
- Integrated token-based authentication and **Kafka event** publishing to enable asynchronous email notifications and workflow processing.
- Built **high-performance paginated and filtered APIs** using Spring Data JPA (derived queries and custom joins/aggregations) to efficiently retrieve large datasets and **support real-time analytics and reporting**.
- Developed **domain lifecycle management services** for EPP status controls, nameserver updates, IDN handling, and glue records, **integrating with registry SOAP web services and enabling asynchronous bulk domain operations using custom executor services**.
- Developed a **JWT-based hierarchical impersonation system** allowing Admins, Registrars, and Resellers to securely log in as downstream accounts for **support and troubleshooting.**
- Integrated **Spring Boot microservices with Angular frontend using Tailwind CSS**, enabling responsive onboarding flows, domain management operations, impersonation workflows, and operational dashboards.

FamousDots: Domain Marketplace Platform

- Built a **Spring Boot REST API** for bulk domain uploads (CSV/Text/Excel) with validation, duplicate detection, and error handling, reducing client listing time by **~60%**.
- Implemented **server-side pagination, sorting, inline price editing, and bulk actions in Angular tables**, improving usability for large domain inventories.
- Restructured backend workflows to support **domain negotiation (offers) and direct purchases**, increasing marketplace flexibility and engagement.
- Designed **optimized MongoDB aggregation pipelines** to generate business insights and speed up reporting.

Data Engineer Intern **June 2025 - August 2025**
Spoutro: Website Activity Tracker

- Built a real-time data ingestion pipeline using **Kafka and PySpark**, implementing streaming jobs to filter and aggregate events before storing them as **Parquet in HDFS** for scalable analytics.
- Processed large-scale **HDFS Parquet datasets with PySpark** and migrated a legacy pipeline from **Hive to Vertica**, implementing complex aggregations and improving daily data processing performance by **10×**.
- Developed a **Java-based data pipeline** to eliminate **Impala** dependency, offloading aggregations to **Vertica** and caching results in **Redis**, significantly reducing query latency.

Education

University of Mumbai (Vivekanand Education Society's Institute of Technology) **2025**
Bachelor of Engineering in Computer Engineering, Overall CGPI: **9.45/10.0**

Maharashtra State Board of Technical Education (Vivekanand Education Society's Polytechnic) **2021**
Diploma in Computer Engineering, Percentage: **94.97%**

Personal Project

MedLeaf: AI-Based Identification and Medicinal Value Assessment of Flora **2025**

- Led the development of a **deep learning model** in **PyTorch,** achieving **82% accuracy** in **plant identification** and **medicinal value assessment.**
- Managed complete **ML pipeline: Data Cleaning, Preprocessing, Model Building** from scratch, **Hyperparameter Optimization**, and **Evaluation**.
- Designed and deployed **Flask-based RESTful APIs** for **real-time predictions** enabling **front-end integration.**
- Deployed the application on **AWS EC2,** ensuring **scalable, secure,** and **reliable cloud access.**

Certifications

Java Spring Framework 6 with Spring Boot 3 with Telusko by Navin Reddy Udemy
2023-24 Tableau Certified Data Analyst Training by Jed Guinto Udemy
The Complete 2023 Software Testing Bootcamp by Tarek Roshdy Udemy
